MCS42
2.16

Níveis Lógicos

- Define as voltagens para representar o 1 e o 0
- Exemplo:
 - 0 : terra ou 0 volts
 - 1 : V_{DD} ou 5 volts
- Qual o valor produzido por uma porta (gate)?
- Se produzir 4.99 volts? Isso é um 0 ou um 1?
- E se 3.2 volts?

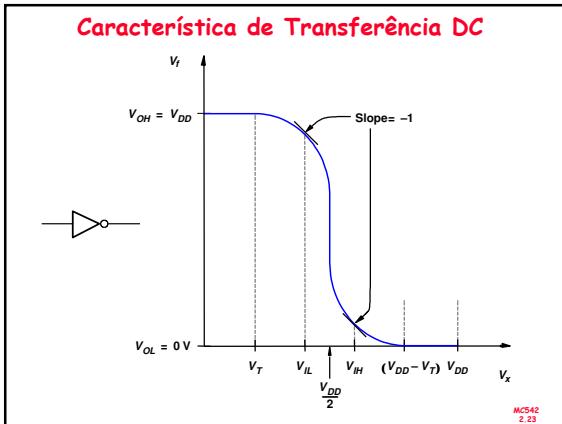

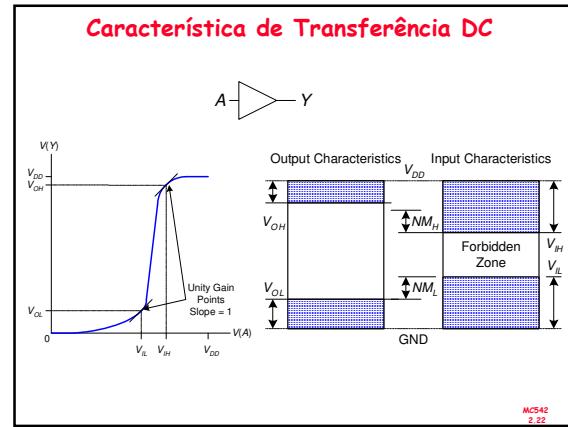

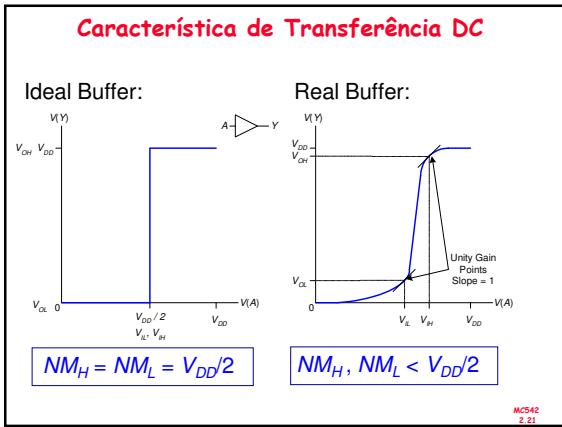

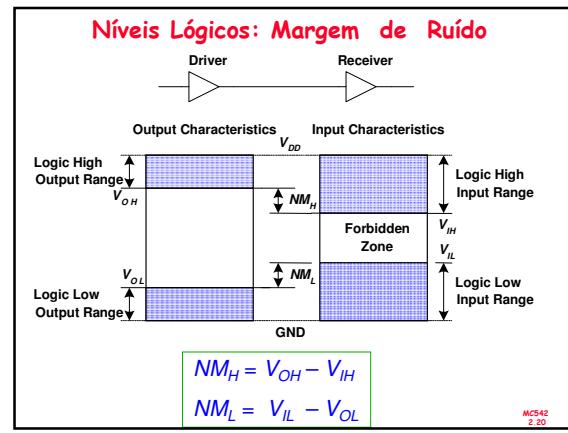

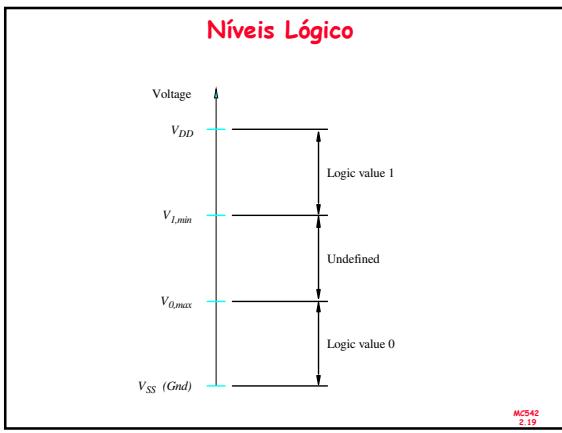

MCS42
2.17

Níveis Lógico

- Define-se intervalos de voltagens para representar o 1 e o 0
- Define-se diferentes intervalos para saídas e entradas para permitir tolerância a ruídos
- Ruído é qualquer coisa que degrada o sinal

Transistores

- Transistores são construídos com silício, um semicondutor
- Silício não é condutor (não tem cargas livres)
- Quando dopado torna-se condutor (tem cargas livres)
