- a** What value of q does PARTITION[2] return when all elements in the array $A[p..r]$ have the same value?
 r is returned.

- b** Modify PARTITION[2] so that $q = \lfloor (p + r) \rfloor / 2$ when all elements in the array $A[p..r]$ have the same value.

```
PARTITION(A,p,r)
01 x <- A[r]
02 equal <- 0
03 do if A[p] = x
04     then equal <- equal + 1
05 i <- p - 1
06 for j <- p to r - 1
07     do if A[j] = A[p]
08         equal <- equal + 1
09     do if A[j] <= x
10         then i <- j + 1
11         exchange A[i] <--> A[j]
12 exchange A[i+1] <--> A[r]
13 do if equal = r - p + 1
14     return floor(( p + r ) / 2 )
15 return i + 1
```
