Giving Meaning to the "Mean"

Let $\mu ::= E[R]$

• What is $\Pr\{R \text{ far from } \mu\}$?

$$\Pr\{|R - \mu| > x\}$$

• R's average deviation?

$$E[|R - \mu|]?$$

12		10	5
3	1	6	14
15	8	11	2

Giving Meaning to the "Mean"

The mean alone is not a good predictor of D 's behavior. We generally need more about its distribution, especially probable deviation from its mean.

15	8	11	2

IQ Higher than 300?

Fraction f with IQ ≥ 300 adds $\geq 300f$ to average, so $100 = \text{avg IQ} \geq 300f$:

$$f \leq 100/300 = 1/3$$

12	10	6	1
3	5	8	14
15	2	11	16

IQ ≥ 300 , again

Suppose we are *given* that IQ
is always ≥ 40 ?

Get a better bound on fraction
f with $\text{IQ} \geq 300$, by considering
IQ - 40
since this is now ≥ 0 .

Copyright © Albert R. Meyer, 2007. All rights reserved.

May 14, 2006

lec 14M.25

4	9	13	7
12	10	6	
3	1	8	14
15	5	11	2

IQ ≥ 300 , again

f contributes $(300-40)f$ to the average of $IQ-40$, so

$$60 = E[IQ-40] \geq 260f$$

$$f \leq 60/260 = 3/13$$

Better bound from Markov by shifting **R** to have **0** as minimum
